

HOME HEATING SAFETY

Detroit Fire Department  detroitmi.gov/fire

DID YOU KNOW?

Across the US, nearly eight out of ten home fire deaths were caused by **heating equipment**.

Carbon Monoxide: The Silent Killer

- Carbon monoxide (CO) alarms should be installed in a central location outside each bedroom and on every level of the home.
- Check smoke alarms and CO detectors regularly.
- Your home can fill with CO if you use your stove or oven as a heating source.
- Gas or charcoal grills can produce CO, so please only use them outside.
- Have heating equipment inspected every year by a qualified professional.

Handle Space Heaters With Care

- Place space heaters on a flat surface.
- Space heaters should be at least three feet away from flammable items, such as drapes, clothes, and bedding.
- Have a five-foot “kid-and pet-free zone” around space heaters.
- Plug them directly into a wall outlet, rather than a surge protector.
- Keep space heaters out of the way of foot traffic.
- Turn space heaters off when you leave the room and before you go to sleep.
